Conceptual

# CI / CD

## **Continuous Integration**

- Small but frequent changes
- Working with multiple people on various aspects of the solution
- Merging back into main branch

## **Continuous Deployment**

- Working in short cycles (often Agile)
- High frequency updates and releases
- Repeatable deployment process

# DevOps vs DataOps vs GitOps

- Concepts are closely linked and somehow vague
- In common
- Use of a source control repository as the source-of-truth and for change management
- Use of staged deployments through multiple environments for QC purposes
- Reliance on automation (testing and deployment)
- We distinguish as follows:

	Applies to	Fabric Projects	Actions
<b>DevOps</b>	Source Code (applications)	Semantic Models (Metadata), Reports, Notebooks, Data Pipelines, Spark Jobs	Build, Package, Deploy
<b>DataOps</b>	Data assets	Lakehouse (Tables and Files), Warehouse, KQL Database, Semantic Models (Refresh)	Create, Load, Delete
<b>GitOps</b>	Infrastructure	Workspaces, Users, Shared data sources, Gateways, Capacities, Azure resources	Create, Configure, Delete

# Git concept

# Staged approach

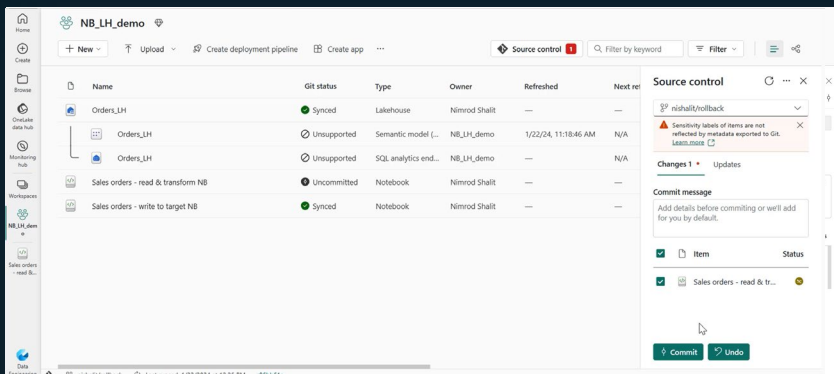

What we have today

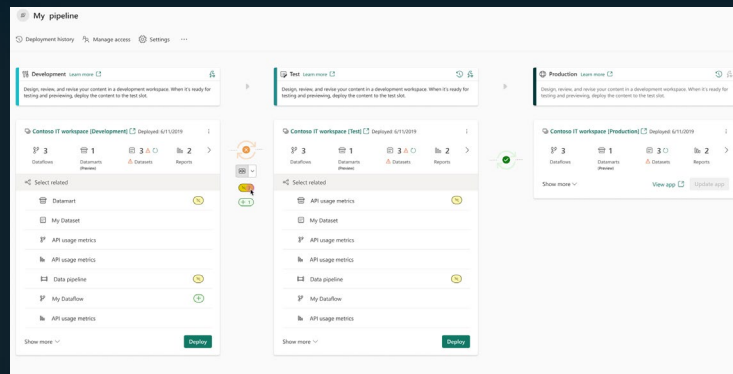

# Fabric CI/CD platform

Built-in git integration

Public preview (with ADO)

Deployment pipelines

GA feature

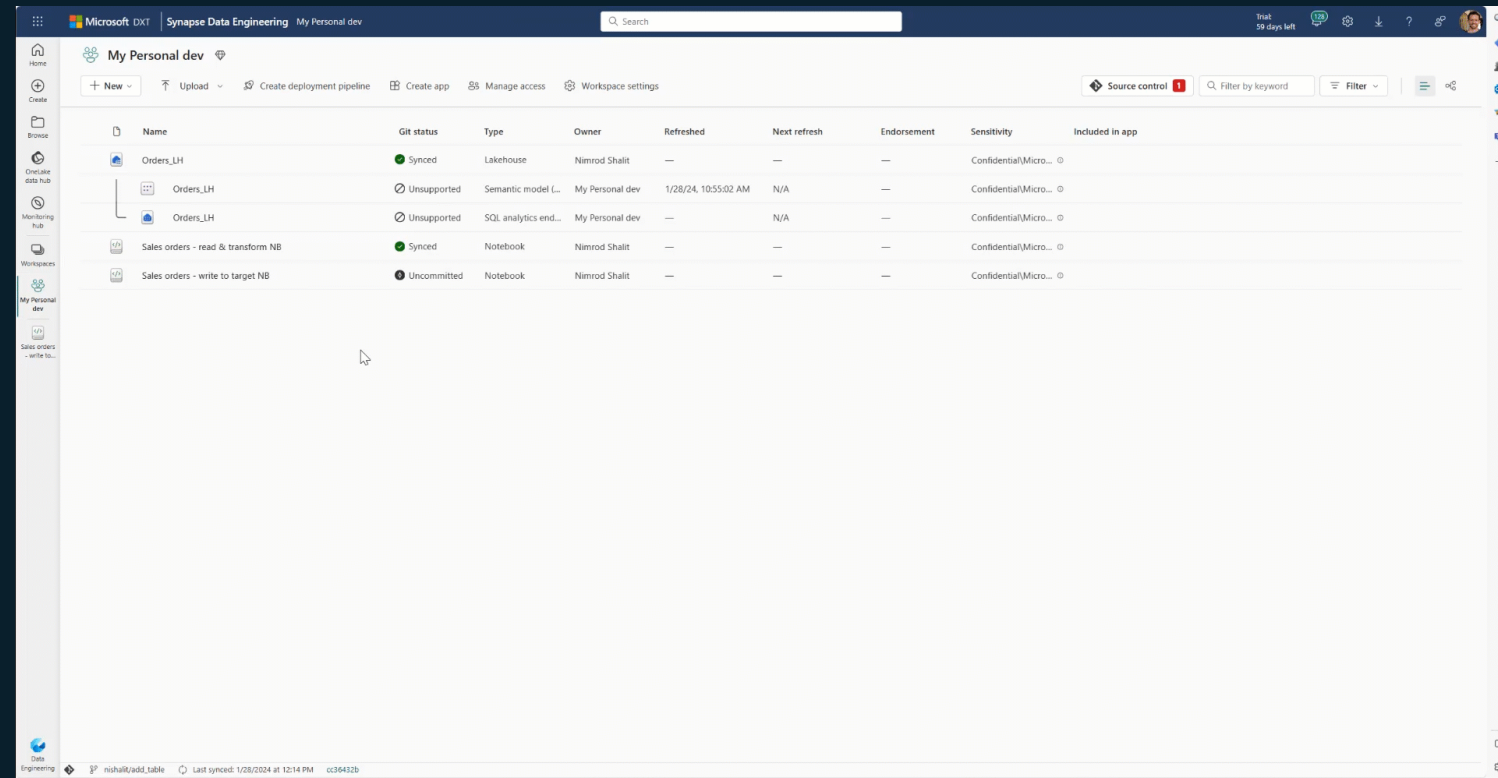

Fabric REST APIs

Public preview

# Git integration

- Sync a WS to a Git branch and back
- Git provider- Azure DevOps
- Supported items
  - Power BI- Report, Paginated report, Semantic models
  - Data Engineering- Notebook, Lakehouse
- Fabric git APIs – REST APIs & PS samples.
- Manage branches using 'Checkout/Switch branch'
- Conflict resolution

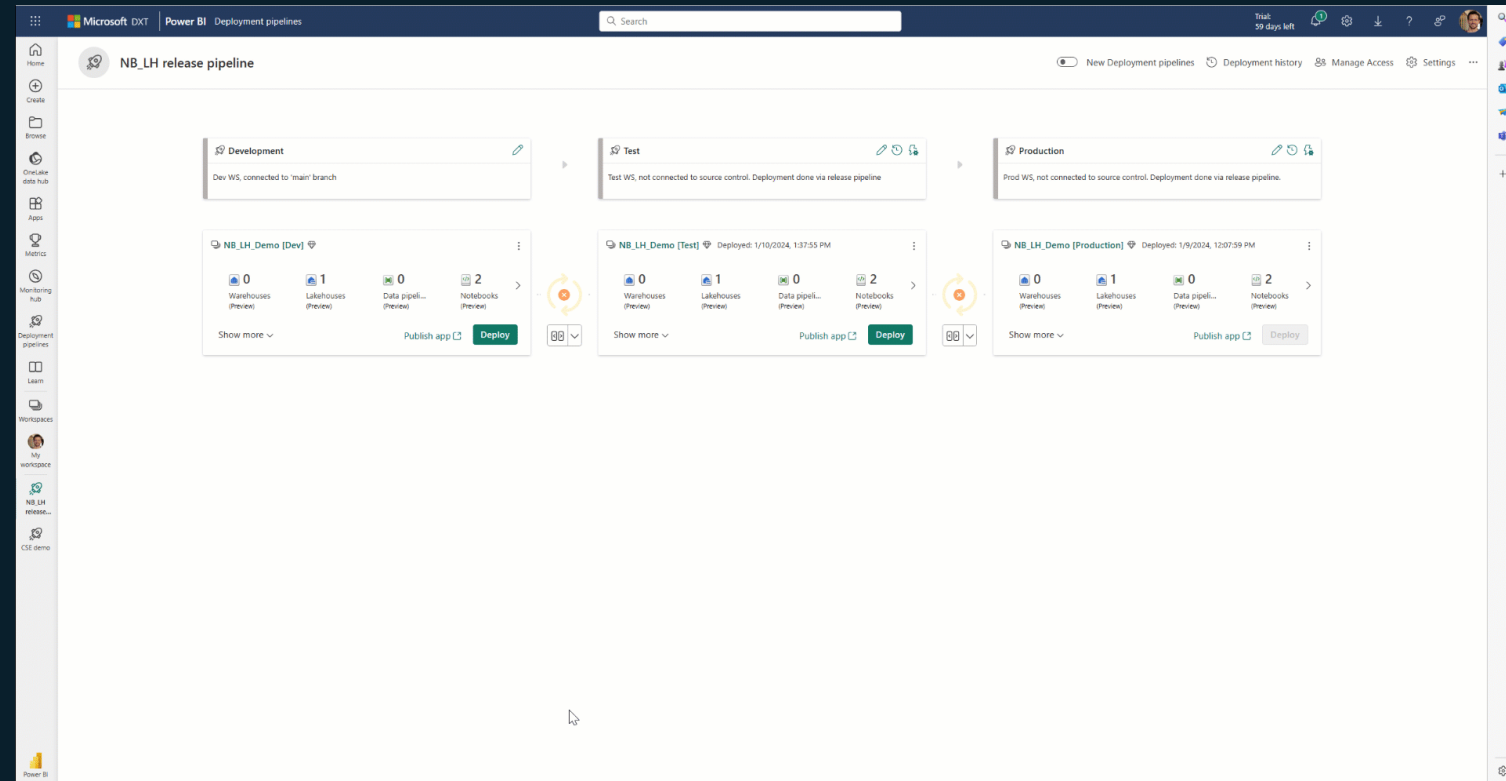

The screenshot shows the Microsoft DXT Synapse Data Engineering interface for a workspace named 'My Personal dev'. A table lists various items and their Git integration status.

Name	Git status	Type	Owner	Refreshed	Next refresh	Endorsement	Sensitivity	Included in app
Orders_LH	Synced	Lakehouse	Nimrod Shalit	—	—	—	Confidential/Micro...	—
Orders_LH	Unsupported	Semantic model (L...	My Personal dev	1/28/24, 10:55:02 AM	N/A	—	Confidential/Micro...	—
Orders_LH	Unsupported	SQL analytics end...	My Personal dev	—	N/A	—	Confidential/Micro...	—
Sales orders - read & transform NB	Synced	Notebook	Nimrod Shalit	—	—	—	Confidential/Micro...	—
Sales orders - write to target NB	Uncommitted	Notebook	Nimrod Shalit	—	—	—	Confidential/Micro...	—

# Deployment Pipelines

- Deploy items across WSs, and apply rules on configuration
- Supported items
  - Power BI- Report, Paginated Report, Semantic model, Dataflow Gen1, Dashboard, data mart
  - Data Engineering- Notebook, Lakehouse
- Compare changes on code-level
- Create a pipeline of 2-10 stages

# Fabric User APIs

- Automated operations on behalf of Fabric users.
- Supported scenarios:
  - Item management (*see table*)
  - Item definition
  - Workspace management
  - Workspace access management
  - Execute item jobs

Item type	Create (without definition)	Get	Update	Delete	List
Dashboard	✗	✗	✗	✗	✓
DataPipeline	✗	✓	✓	✓	✓
Datamart	✗	✗	✗	✗	✓
Eventhouse	✓	✓	✓	✓	✓
Eventstream	✓	✓	✓	✓	✓
KQLDatabase	✗	✓	✓	✓	✓
KQLQueryset	✓	✓	✓	✓	✓
Lakehouse	✓	✓	✓	✓	✓
MLExperiment	✓	✓	✓	✓	✓
MLModel	✓	✓	✓	✓	✓
MirroredWarehouse	✗	✗	✗	✗	✓
Notebook	✓	✓	✓	✓	✓
PaginatedReport	✗	✗	✗	✗	✓
Report	✗	✓	✗	✓	✓
SemanticModel	✗	✓	✗	✓	✓
SparkJobDefinition	✓	✓	✓	✓	✓
SQLEndpoint	✗	✗	✗	✗	✓
Warehouse	✓	✓	✓	✓	✓

New announcements

# New Fabric items supported in CI/CD

Item	Git integration	Deployment pipelines
Power BI reports	✓	✓
Power BI paginated reports	✓	✓
Power BI Semantic models*	✓	✓
Notebooks	✓	✓
Lakehouse	✓	✓
<b>Data pipelines</b>	✓	✓
<b>Data Warehouse</b>	✓	✓ (Soon)
<b>Spark Job definition</b>	✓	✓ (Soon)
<b>Spark Environment</b>	✓	✓ (Soon)

\* No push datasets, DirectLake mode

# E2E Automated CI/CD process

## Enabling fully automated CI/CD processes using familiar tools

- Git APIs
  - Connect/Disconnect a workspace to a git branch
  - Commit to git
  - Update from git
  - Get item status
- Deployment pipelines APIs
  - Deploy all workspace content
  - Deploy selected items
  - Create a pipeline *(coming soon)*
  - Assign a workspace to a pipeline stage *(coming soon)*
  - Manage user access to a pipeline *(coming soon)*

# Branch out to new workspace (*soon*)

- **Branch out to new workspace –**

- Create a new isolated work environment (workspace & branch) in a few clicks.
- After clicking 'Create':
  - New workspace is created and assigned to a capacity
  - New branch is created, based on existing branch
  - New branch and workspace are connected
  - Branch content is synced into the workspace
- Developer lands in new workspace, reducing 'time-to-code'.

A screenshot of a dialog box titled 'Create new branch and workspace'. The dialog has a close button (X) in the top right corner. Below the title, there is a descriptive text: 'Create a copy of your current branch, connect it to a new workspace, and make changes without affecting your current workspace. [Learn more](#)'. The dialog contains two main input sections. The first section is 'Branch name \*' with a text input field containing 'merge\_sales\_table'. Below this is 'Based on ⓘ' with a dropdown menu showing 'Main'. The second section is 'Workspace name \*' with a text input field containing 'merge\_sales\_table'. At the bottom right, there are two buttons: a green 'Create' button and a grey 'Cancel' button. A pink circle and a mouse cursor are pointing at the 'Create' button.

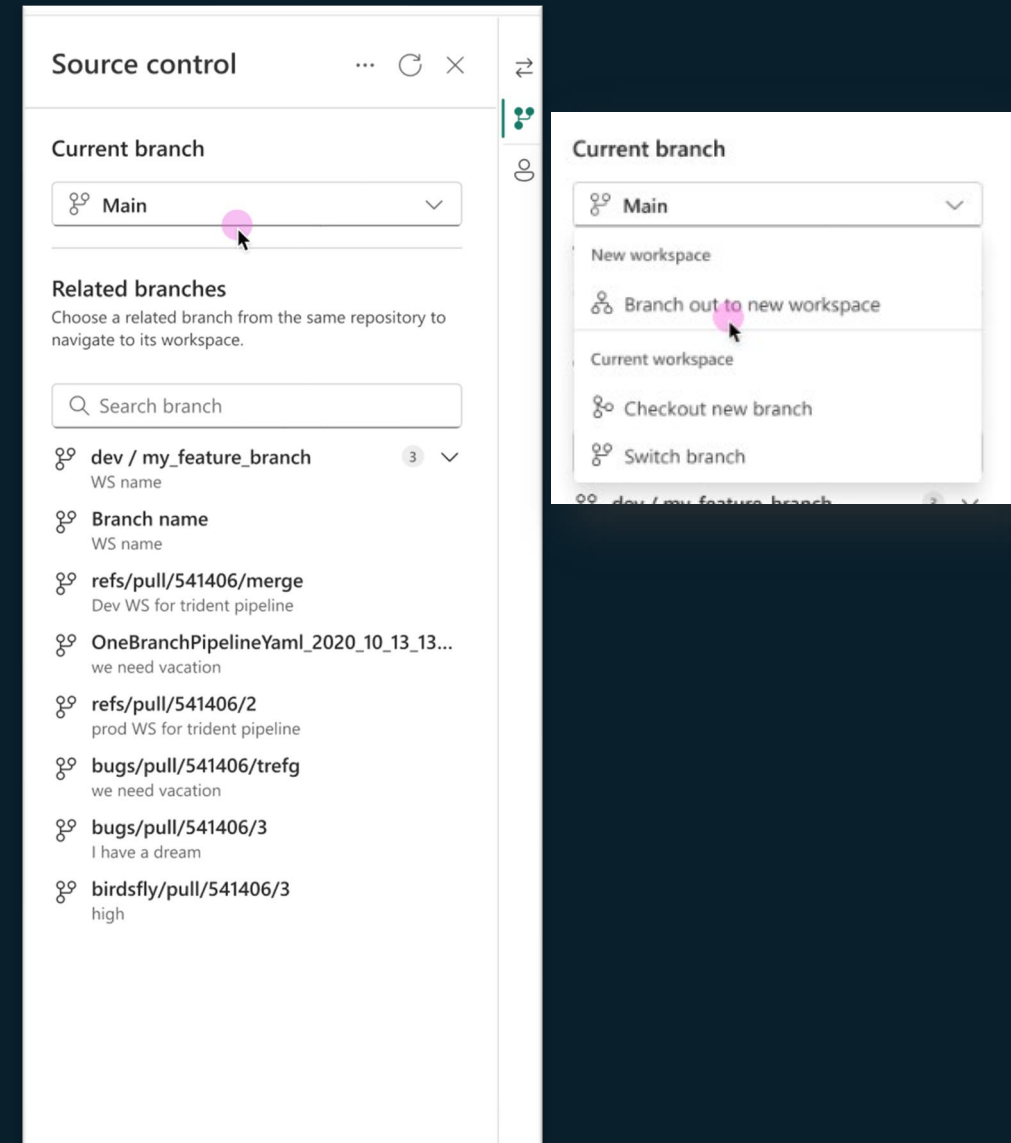

# Contextual navigation (*soon*)

- **Branches tab**

- Consolidate all branch related actions in a single place within the source control pane

- **Contextual navigation**

- Find other branches and navigate to their respective workspaces.
- Contextual list of the same 'branch workspaces'.

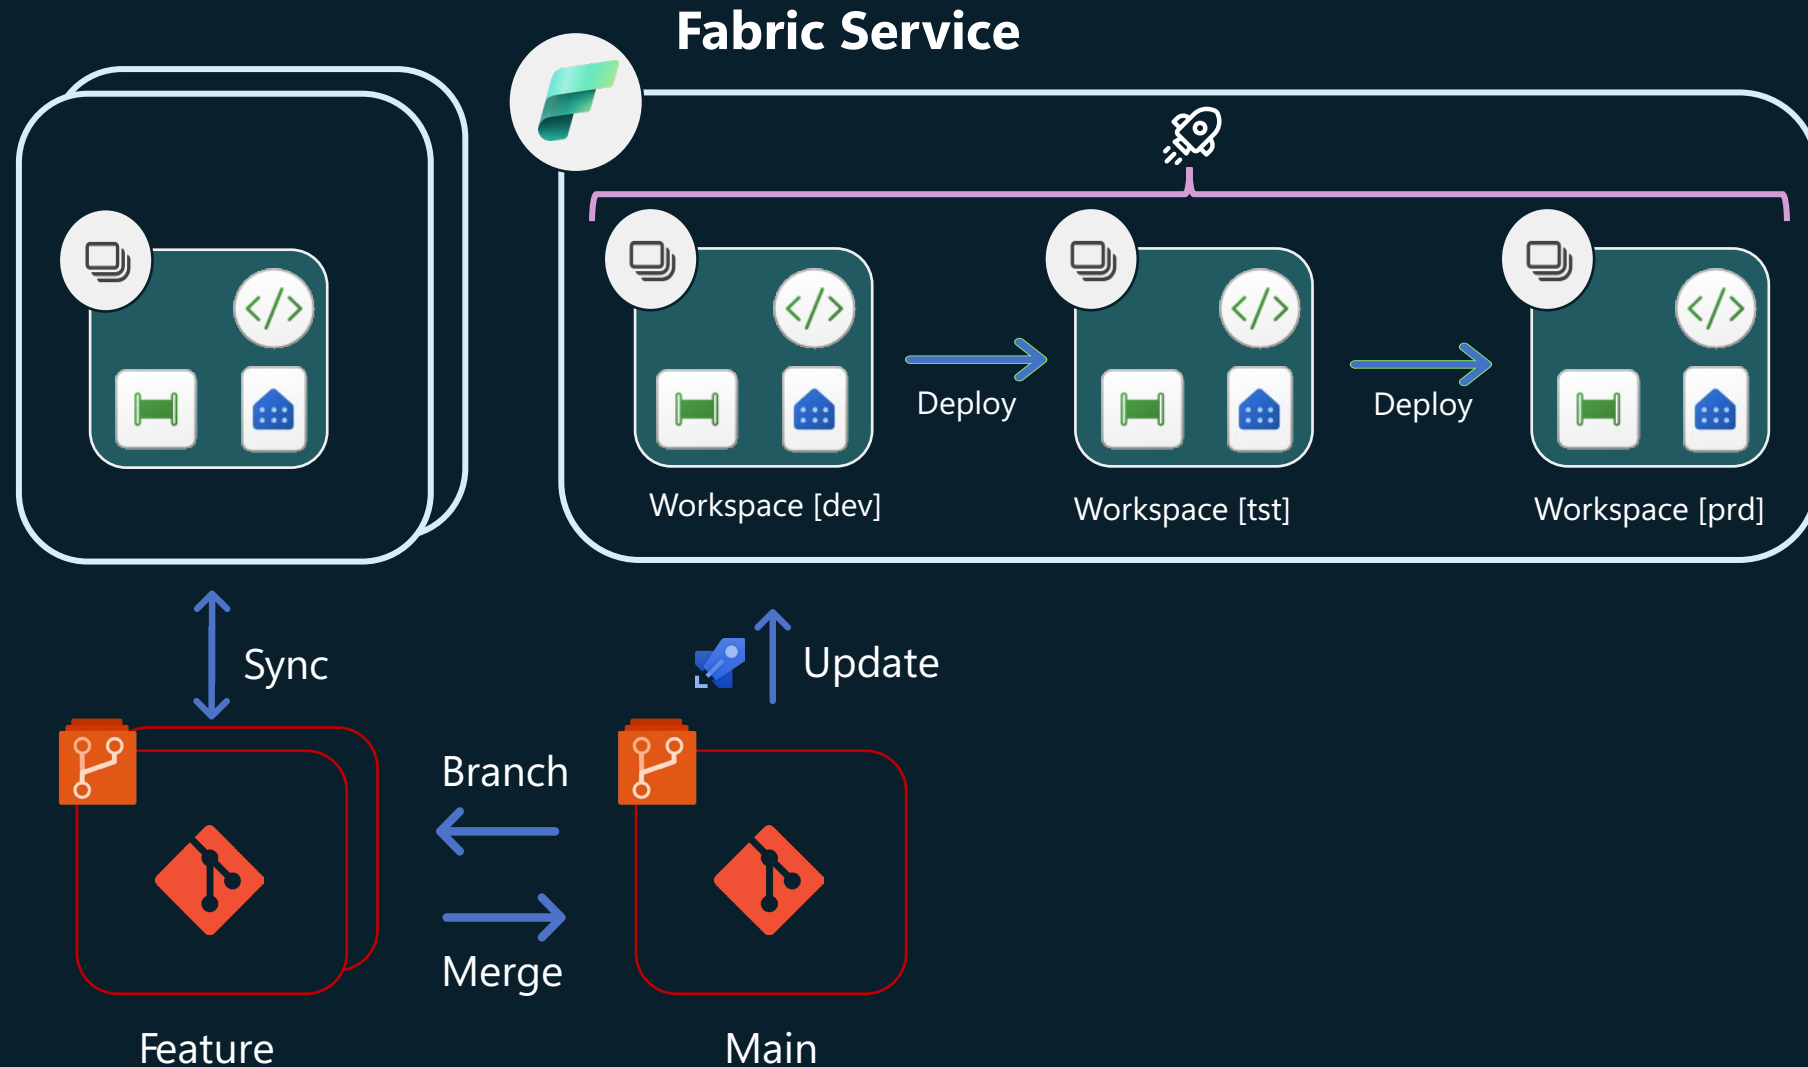

# Deployment Strategies

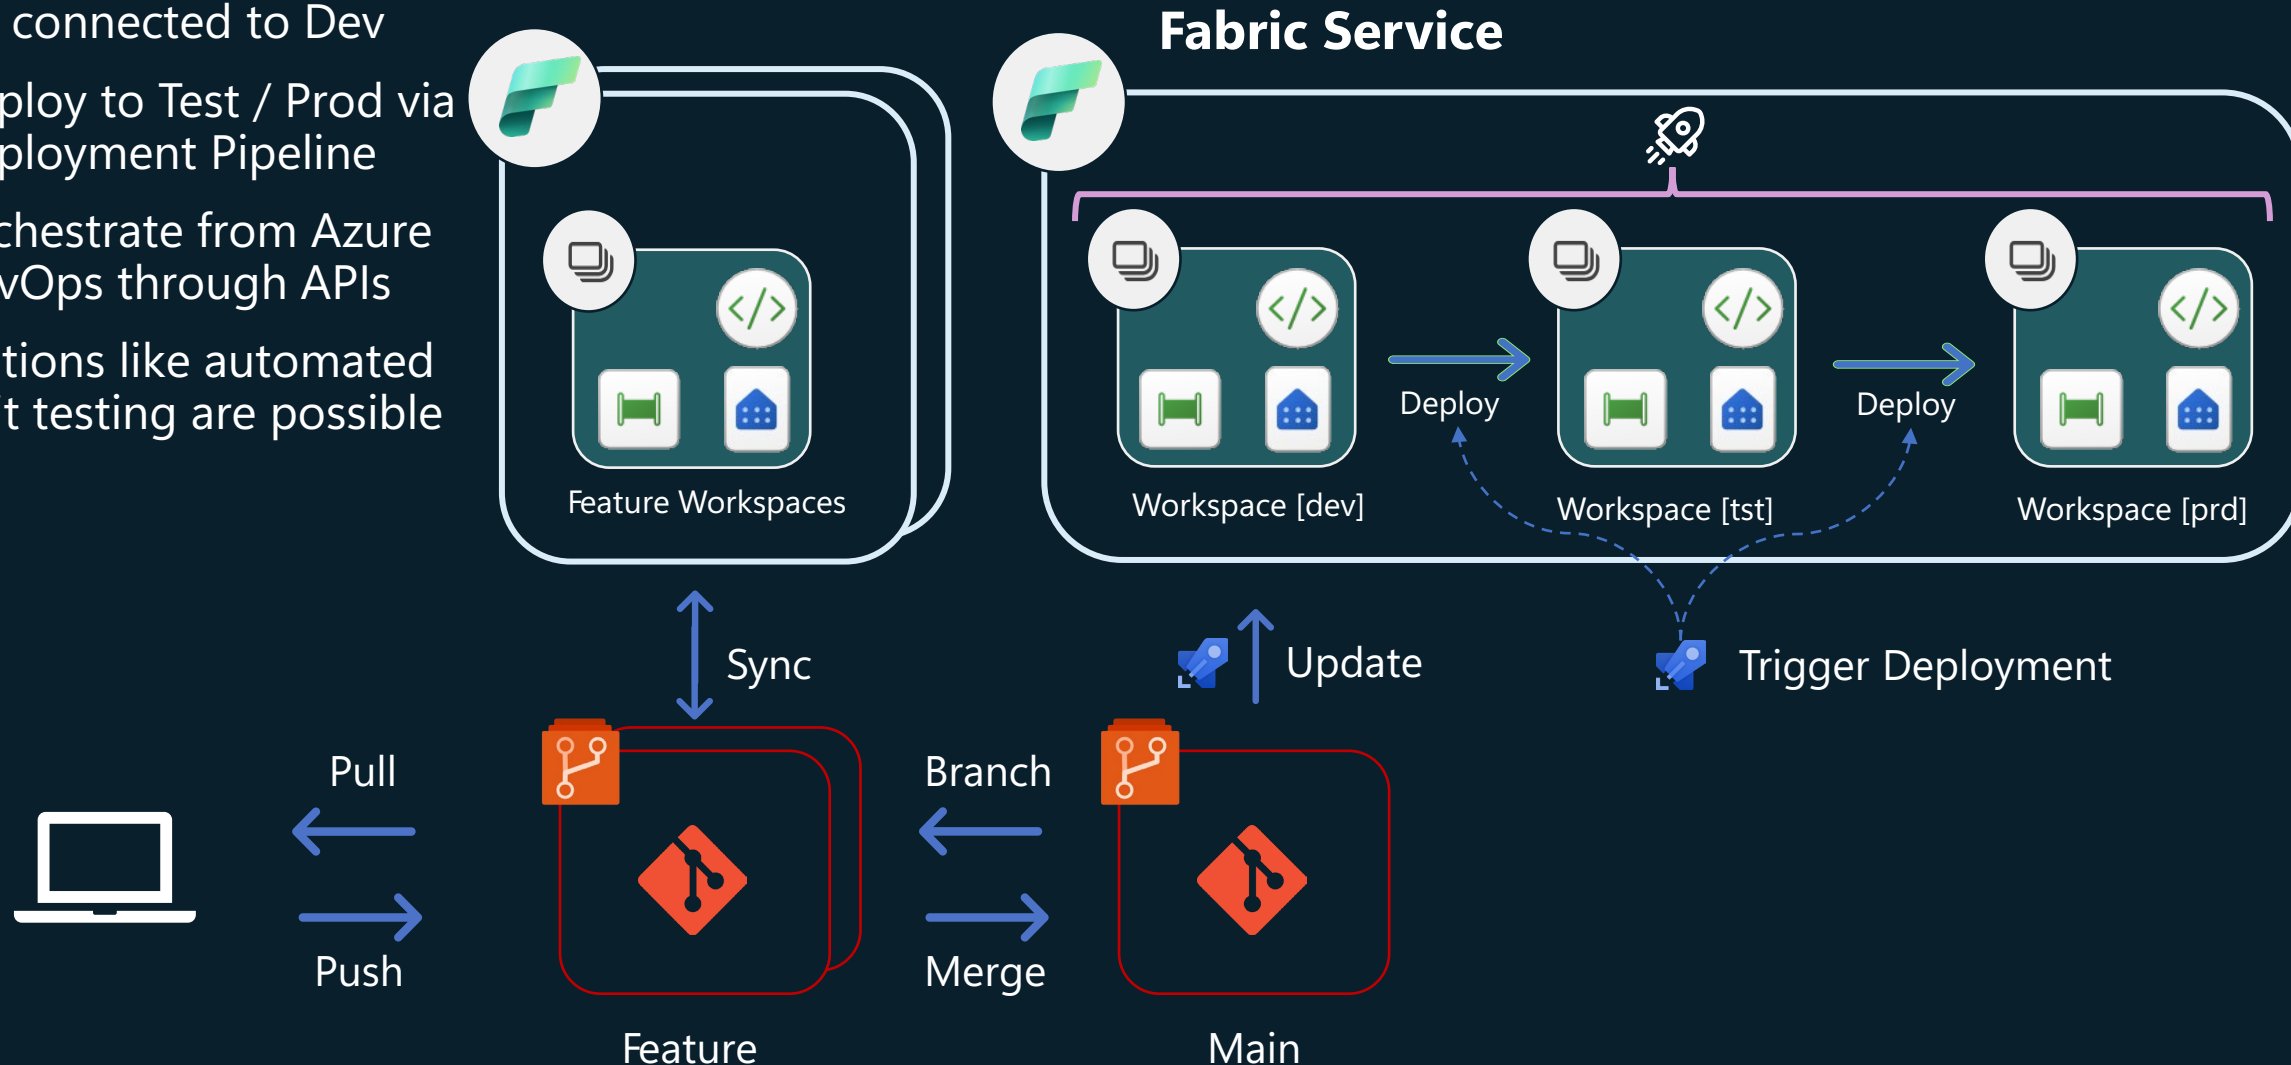

# Scenario 1 (CD)

- Git connected to Dev
- Deploy to Test / Prod via Deployment Pipeline

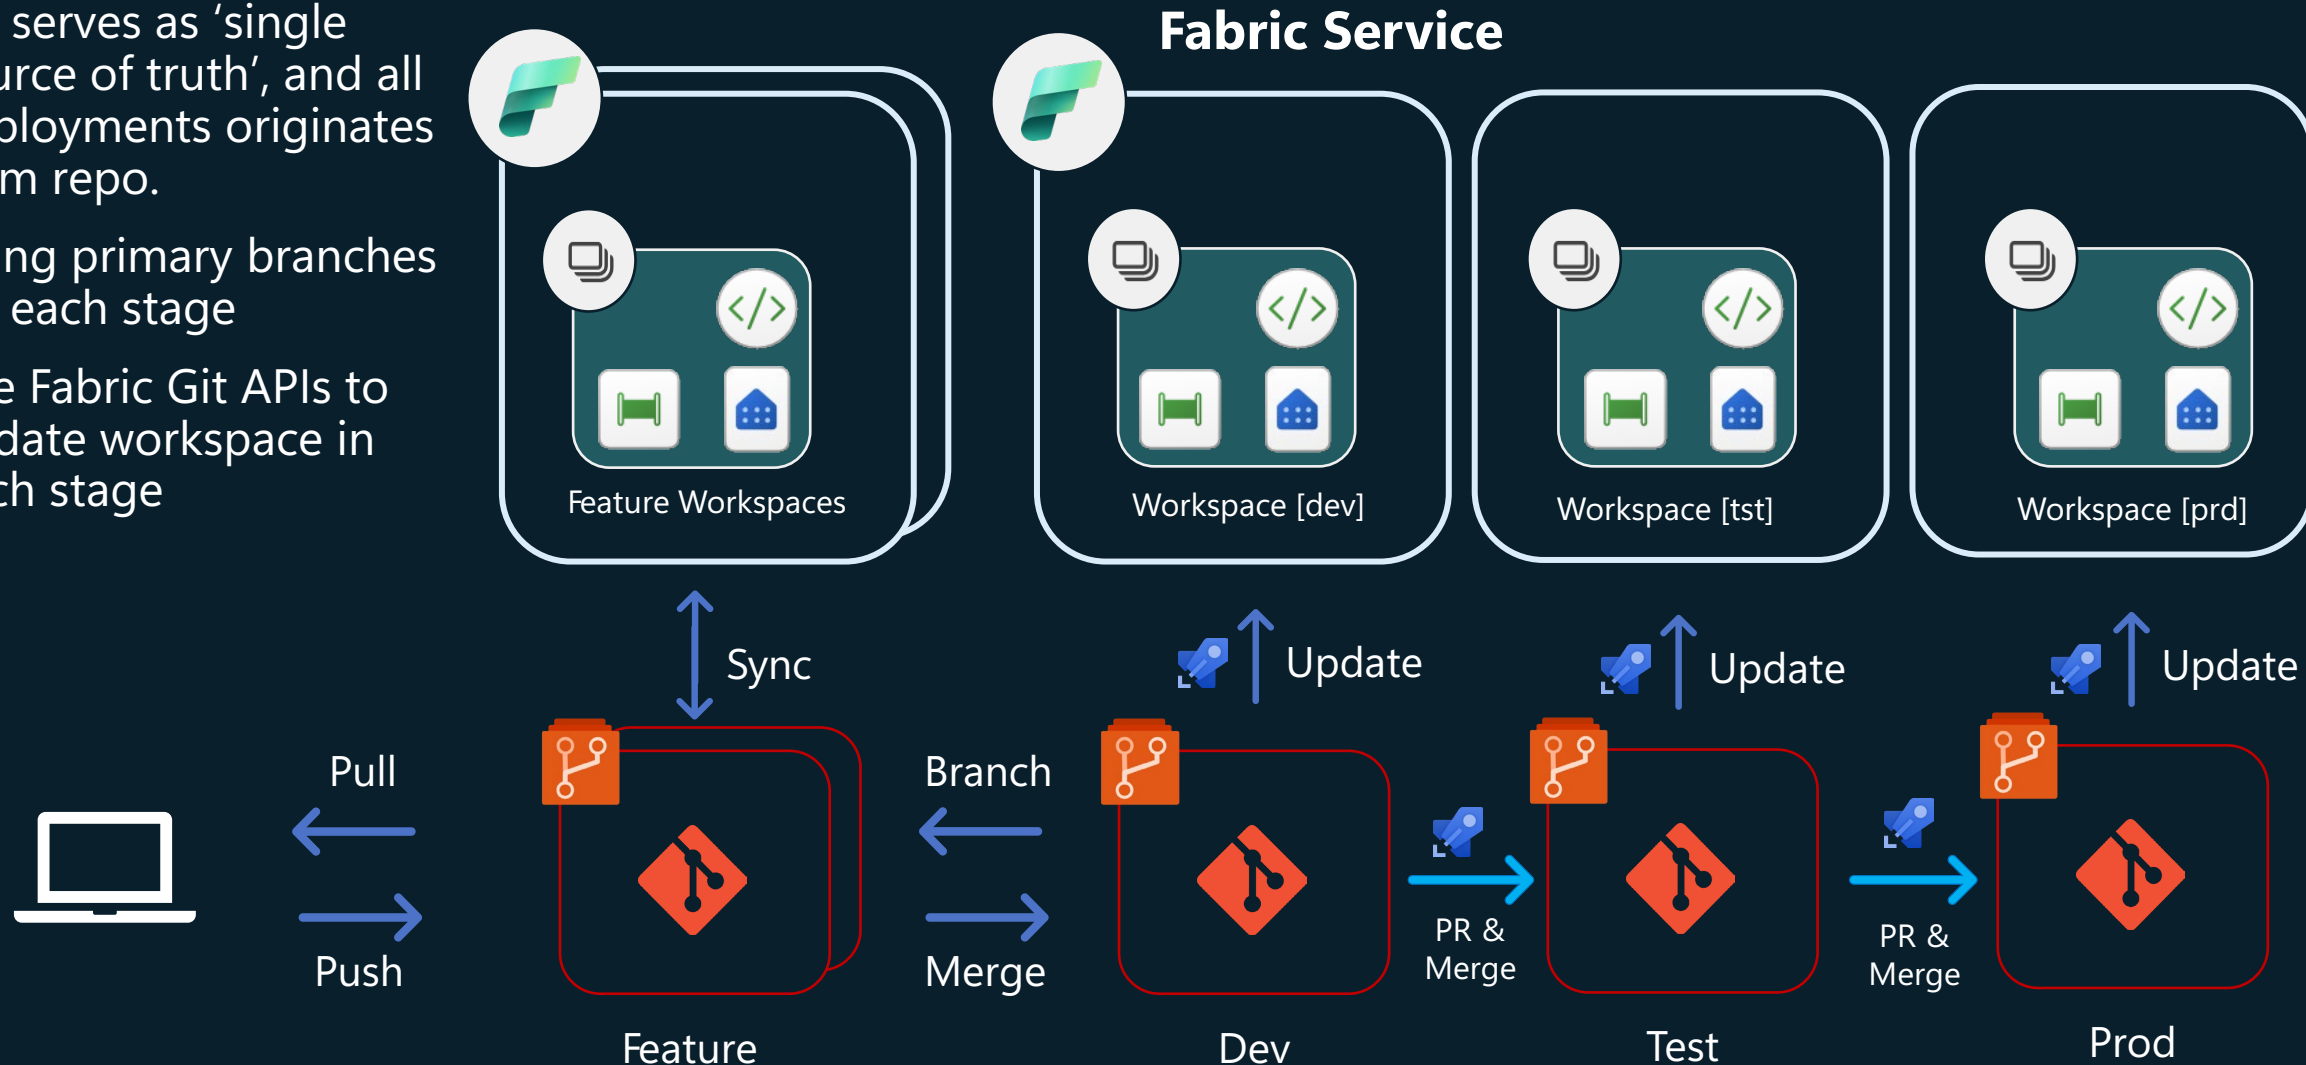

# Scenario 2 – Git & Deployment pipelines

- Git connected to Dev
- Deploy to Test / Prod via Deployment Pipeline
- Orchestrate from Azure DevOps through APIs
- Options like automated unit testing are possible

# Scenario 3 – Git- based deployments

- Git serves as 'single source of truth', and all deployments originates from repo.
- Using primary branches for each stage
- Use Fabric Git APIs to update workspace in each stage

Demo

# Scenario 2 – Git & Deployment pipelines

- Git connected to Dev
- Deploy to Test / Prod via Deployment Pipeline
- Orchestrate from Azure DevOps through APIs
- Options like automated unit testing are possible

## Limitations & Roadmap

# Limitations for automation (May 14th 2024)

Topic	Deployment Pipeline	GIT Integration	Fabric API / Custom Code
Shortcut creation	Not supported	Not supported	Fully supported
Service Principals	n/a	Not supported	Not supported
All item types	Not supported	Not supported	Not supported
Change connections	Deployment rules		
Change Report Connections	Only specific scenarios	Not supported	Report Rebind API
Data Load	Manual	Manual	Can be automated
Other Git Providers	n/a	Not (yet)	Fully supported
Automated Testing	Not supported	Not supported	Fully supported
Branching	n/a	Fixed names	Any
Folders	Not supported	Not supported	??

\* List is not complete. Specific scenarios like Metadata references in Notebooks are also not yet supported.

# Roadmap

- New git providers - GitHub and GitHub Enterprise
- Azure DevOps connections across different tenants
- Git General Availability (GA)
- Supported items:
  - Semantic models with DirectLake
  - Reflex
  - EventStream
  - Eventually, all items in fabric...
- Service Principal – gradual support
- Folders in Git integration
- Compare changes between workspace and Git branch

Closing
